Page Refreshes Without Logging In After Entering Valid Credentials

Description

When a user enters valid credentials and clicks the "Login" button, the page refreshes but does not log the user in. The user remains on the login page without being redirected to the dashboard.

Steps to Reproduce:

1. Open a web browser.
2. Navigate to http://localhost:3000/login.
3. Enter a valid username and password.
4. Click the "Login" button.

Expected Result: The user should be redirected to the dashboard, and a welcome message should be displayed.

Actual Result: The page refreshes, and the user remains on the login page without being logged in.

Environment:

Browser: Google Chrome 94.0.4606.81

Operating System: Windows 11(22621.4317)

Application Version: N/A
